Trieve Solutions designs and develops CYBERtrieve™ technology for archiving and retrieving Internet content. Our AUTOtrieve™ servers process web sites on a continual basis to extract and store content, including text, image, sound, and video content. Our mission is to archive public Internet content for later retrieval to support the legal and business communities, as well as for use by individual clients.

We perpetually archive content to create a historical record of web site evolution. To that end, our SITEtrieve™ robots maintain a list of existing domain names; growing with the expansion of the Internet. In addition, our WHOtrieve™ robots maintain historical Whois information for each domain name. Every public file for every domain name is then indexed and archived by our PAGEtrieve™ robots. Domain name content is augmented by FINDtrieve™ robots, which crawl through the Internet, accessing addition web pages.

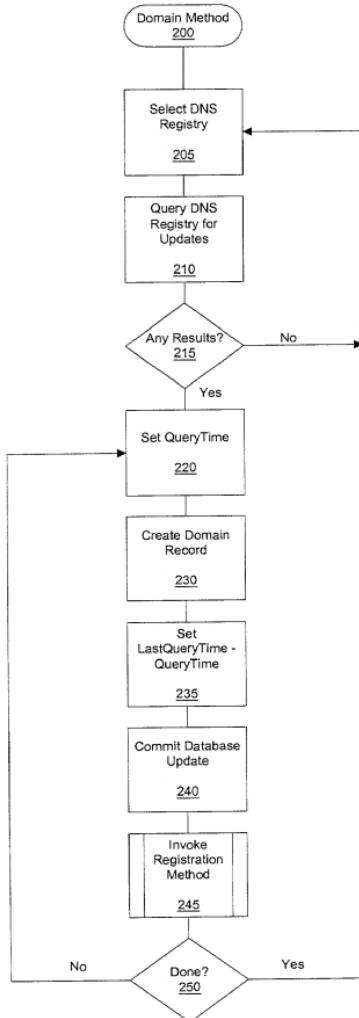

Retrieval of the data is through our ARCtrieve™ interface. Various report formats are available to suit our clients' needs. Tired of stale search results from other search engines? Our additional LINKtrieve™ module can interface with any affiliated search engine to provide historical content for those stale links, or any other hit.
